

these are comments in regards to the nab petition 04-160. i am an over the road truck driver. i am also a 24 year old guy. xm is the best thing going for me out here on the road. and, since they started the instant traffic and weather channels, i have benifited from them. for instance, when im driving through the LA area, i want to know where i need to be alert for traffic problems, and if possible, use another route. since i dont live in these cities that i drive through, i have no idea what local radio stations to tune into for this information, as well as, in the middle of the day, i have no idea what time i should try to locate the information on the radio, let alone, what radio station. it takes a lot of concentration for me to be a professional driver, and when im in bumper to bumper LA traffic, or any other city, i dont have the ability to try and do a channel scan, hoping to get lucky, and hear a traffic report. with these comments, im asking you to reject the nab's petition 04-160, and to let xm provide the programming, that i willing pay for. thanks for your consideration. isaac w.
